

System (Configuration)

This is where system settings are configured.

1. Debugging information output: preparation for website speed testing.
2. Taking the website temporarily offline for maintenance.
3. Setting up email notifications.
4. Setting up SMTP for sending mail.
5. System (the Box) update.

To navigate to this subsection perform the following steps:

1. Begin by going to the admin area of your e-store.
2. Choose the menu item called "Configuration" in the left-hand menu.
3. In the previously chosen subsection click the "System" tab.

The screenshot displays the 'System' configuration page within an e-commerce admin interface. On the left, a dark sidebar contains a menu with items: Orders, Pricing, Promotion, Contents, Catalog, Users, Configuration (highlighted with a red box and a wrench icon), and Reports. The main content area has a breadcrumb trail: Configuration > System > General. Below this, there are tabs for Website configuration, Orders, Delivery, Languages, System (highlighted with a red box), and Access to search by IP. Under the 'System' tab, there are sub-tabs for General and Update. The 'General' sub-tab is active, showing a 'General' section with several settings: 'Debug information' (with a 'Hide' link), 'The website is temporary unavailable' (with a 'Disable' link), and 'Enter captcha when sign in into admin panel' (with a 'Disable' link). To the right of these is the 'Items comments' section, which includes 'Admin's email', 'Outbound email address for comments', and 'Name of sender (service)'. Below these is the 'SMTP settings for mailing' section, which contains five input fields: 'SMTP server address' (placeholder: {empty}), 'SMTP server port' (placeholder: {empty}), 'SMTP server login' (placeholder: {empty}), 'SMTP server password' (placeholder: {empty}), and 'Use SSL security protocol' (with a 'Don't use' link).
