Description

"Banker" Module is flexible pricing. Read more about module price and connection on the website: <http://en.otcommerce.com/prices-and-promo>

"Top" and "Connect" Box versions include this module by default.

Read more about detailed description for business benefits here: [Банкир \(описание модуля\)](#)

"Banker" Module settings consist of two main steps:

1. Add price group.
2. Bind category to price group.

Add price group

It is possible to add price group for:

1. For all goods categories.
2. For several goods categories.
3. For single goods category.

That is, it is possible to create unlimited number of price groups with different conditions for delivery calculation and margin percent to goods price.

Click "Add price group" in Banker tab to add price group:

The screenshot shows the 'Banker module' interface. At the top, there are tabs for 'Currency', 'Price', 'Discounts', and 'Banker'. Below the tabs, the title 'Banker module' is displayed. Underneath, there is a section for 'Price groups' with a blue button labeled 'Add price group' highlighted by a red rectangle. Below the button is a table with the following columns: Name, Description, Pricing strategy, Intervals, Categories, Provider of items, and Action.

Name	Description	Pricing strategy	Intervals	Categories	Provider of items	Action
★ Simple Taobao	Default simple price formation	AdvancedDeliveryByQuantityIfNoWeight	Limit:0		Taobao	⚙️
All groups	All groups	AdvancedDeliveryByQuantityIfNoWeight	Limit:0 Margin:25%		Taobao	⚙️
★ Simple Warehouse	Default simple price formation	AdvancedDeliveryByQuantityIfNoWeight	Limit:0 Margin:40%		Warehouse	⚙️
★ Simple Alibaba1688	Default simple price formation	ManyIntervals	Limit:0 Margin:0%		1688.com	⚙️

General settings

Fill in "Price group name" field

The screenshot shows the 'Adding price group' form. At the top, there are tabs for 'Currency', 'Price', 'Discounts', and 'Banker'. Below the tabs, the title 'Adding price group' is displayed. The form contains several fields: 'Price group name' (highlighted with a red box and containing the text 'Kids toys'), 'Description', 'Provider of items' (a dropdown menu set to 'Taobao'), and 'Default group' (a checkbox). Below these fields is a section for 'Price intervals' with columns for 'Interval CNY', 'Margin percent', 'Margin rate CNY', 'Delivery price for this group CNY', and 'Fixed margin for group CNY'. There are input fields for 'For all intervals' and a link to 'Add price interval'. At the bottom, there is a section for 'Complex settings for advanced users' and two buttons: 'Save' and 'Cancel'.

Fill in "Description" field:

[Pricing](#) > [Banker](#) > Adding price group

[Currency](#) [Price](#) [Discounts](#) [Banker](#)

Price intervals

Pricing for goods of different price categories is set in "Intervals" block:

Price group name

Description

Provider of items

Default group

Price intervals

Interval CNY	Margin percent	Margin rate CNY	Delivery price for this group CNY	Fixed margin for group CNY
For all intervals			<input type="text" value=""/>	<input type="text" value="0"/>
Add price interval				
<input type="text" value="0"/> - <input type="text" value=""/>	<input type="text" value="0"/>	<input type="text" value=""/>	<input type="text" value=""/>	<input type="text" value=""/>

Complex settings for advanced users

[Save](#) [Cancel](#)

Delivery

First, we set margin for Local delivery (delivery within China set by Vendor on trade provider website):

Set delivery value in "Delivery price for this group CNY" field. This value will be taken for **delivery price of 1 item**.

Example: we set 20 yuan in this field and delivery price will be the following:

- 1 item = 20 yuan
- 2 items = 40 yuan
- 10 items = 200 yuan

Set in yuan:

Home > Pricing > Banker > Editing price group

Currency | Price | Discounts | Banker

Editing price group

Price group name: Kids toys

Description: Toys for children from 0 to 5 years

Provider of items: Taobao

Default group:

Price intervals

Interval CNY	Margin percent	Margin rate CNY	Delivery price for this group CNY	Fixed margin for group CNY
For all intervals			20	0

[Add price interval](#)

0 - 0

Complex settings for advanced users

Save | Cancel

Compare:

Before (12 CNY)	After (20 CNY)
------------------	-----------------

Now we add value to "Fixed margin for group CNY" field. **This value is added to delivery price of any quantity of goods.**

Example: on the condition above, we know that delivery price of each item is 20 yuan. We get the following result if we set 10 yuan in "Fixed margin for group CNY" field:

1 item = 20 yuan + 10 yuan = 30 yuan

2 items = 2*20 yuan + 10 yuan = 50 yuan

10 items = 10*20 yuan + 10 yuan = 210 yuan

Set value in field:

Home > Pricing > Banker > Editing price group

Currency Price Discounts Banker

Editing price group

Price group name: Kids toys

Description: Toys for children from 0 to 5 years

Provider of items: Taobao

Default group:

Price intervals

Interval CNY	Margin percent	Margin rate CNY	Delivery price for this group CNY	Fixed margin for group CNY
For all intervals			20.00	10

[Add price interval](#)

0 - 0

Complex settings for advanced users

Save Cancel

Delivery can be also set for each price interval:

Price group name

Description

Provider of items

Default group

Price intervals

Interval CNY	Margin percent	Margin rate CNY	Delivery price for this group CNY	Fixed margin for group CNY
For all intervals			<input type="text" value="20.00"/>	<input type="text" value="10"/>
Add price interval			<input type="text"/>	<input type="text"/>

-

Complex settings for advanced users

Default value will be used if fields are empty:

Price group name

Description

Provider of items

Default group

Price intervals

Interval CNY	Margin percent	Margin rate CNY	Delivery price for this group CNY	Fixed margin for group CNY
For all intervals			<input type="text" value="20.00"/>	<input type="text" value="10"/>
Add price interval			<input type="text"/>	<input type="text"/>

-

Complex settings for advanced users

Goods: add price interval

There is a system of interval margin for goods margin.

Price interval is a basis of flexible pricing. The essence of intervals is to divide group of goods by price and set own margin and delivery.

For example: there are men's pants at the price of 100 yuan, up to 1000 yuan and above. It is possible to divide into intervals: from 0 to 100 yuan, from 101 to 1000 yuan and from 1001 yuan and above. There are three intervals. And it is possible to make settings only for pants above 1000 yuan or only for pants below 1000 yuan.

We make the following settings as an example:

- Goods from 0 to 100 yuan will have 10% margin to each item and 25 yuan will be added to the total sum of all goods. Delivery by default.
- Goods from 100 to 300 yuan will have 15% margin to each item and 30 yuan will be added to the total sum of all goods. Delivery will be 10 yuan for each item and 20 yuan to total delivery.
- Goods from 300 yuan and above have 55% margin to each item and 70 yuan will be added to the total sum of all goods. Delivery by default.

Now we make settings in a special form. It is necessary to set initial value for each price interval. We add 2 additional fields to set 3 intervals. Click "Add price interval" link 2 times:

The screenshot shows a form for configuring price intervals. The top section contains fields for 'Price group name' (Kids toys), 'Description' (Toys for children from 0 to 5 years), 'Provider of items' (Taobao), and 'Default group' (checked). Below this is the 'Price intervals' section, which is a table with the following columns: Interval CNY, Margin percent, Margin rate CNY, Delivery price for this group CNY, and Fixed margin for group CNY. The first row is for 'For all intervals' with values 20.00 and 10. A red box highlights the 'Add price interval' link. Below the link, there are three empty rows for adding new intervals, each with a red 'x' icon for deletion. At the bottom, there is a 'Complex settings for advanced users' section and 'Save' and 'Cancel' buttons.

This is what we get:

This screenshot shows the same form as above, but with three price intervals added. The 'Add price interval' link is now blue. The three new intervals are highlighted with a red box. Each interval has a red 'x' icon for deletion. The 'Complex settings for advanced users' section and 'Save' and 'Cancel' buttons are also visible.

We have enough fields now. We can start to add initial values of our intervals: 0, 100 and 300:

Price group name

Description

Provider of items

Default group

Price intervals

Interval CNY	Margin percent	Margin rate CNY	Delivery price for this group CNY	Fixed margin for group CNY
For all intervals			<input type="text" value="20.00"/>	<input type="text" value="10"/>
Add price interval				
<input type="text" value="0"/> - <input type="text" value="100"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="text"/>	<input type="text"/> ✕
<input type="text" value="100"/> - <input type="text" value="300"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/> ✕
<input type="text" value="300"/> - <input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/> ✕

Complex settings for advanced users

System automatically added second interval value.

i What margin will be set for goods at the price of 100 yuan? It's in two intervals at once!

Answer is the following: margin will depend on second interval (from 100 to 300 yuan), as the rightmost value is used to denote the border, and the last valid value will be one less, because the last value is already the first in the next interval.

- from 0 to 100 — last value is 99
- from 100 to 300 — last value is 299
- from 300 and above — any value from 300 to infinity

Mathematical notation is the following: $[0; 100)$, $[100; 300)$, $[300; +\infty)$

Set margin from example above:

Price group name

Description

Provider of items

Default group

Price intervals

Interval CNY	Margin percent	Margin rate CNY	Delivery price for this group CNY	Fixed margin for group CNY
For all intervals			<input type="text" value="20.00"/>	<input type="text" value="10"/>
Add price interval				
<input type="text" value="0"/> - <input type="text" value="100"/>	<input type="text" value="10"/>	<input type="text" value="25"/>	<input type="text"/>	<input type="text"/>
<input type="text" value="100"/> - <input type="text" value="300"/>	<input type="text" value="15"/>	<input type="text" value="30"/>	<input type="text" value="10"/>	<input type="text" value="20"/>
<input type="text" value="300"/> - <input type="text"/>	<input type="text" value="55"/>	<input type="text" value="70"/>	<input type="text"/>	<input type="text"/>

Complex settings for advanced users

The table below will show example how these settings influence goods price and delivery:

Interval CNY	Goods quantity	Goods price	Margin %	Fixed margin CNY	Delivery "Delivery value CNY"	Delivery "Fixed margin to delivery CNY"	Total sum of order with delivery
from 0 to 100	1	10	$10 \times 1 + 10\% = 11$	$11 + 25 = 36$	$36 + 20 \times 1 = 56$	$56 + 10 = 66$	66
	2	10	$10 \times 2 + 10\% = 22$	$22 + 25 = 47$	$47 + 20 \times 2 = 87$	$87 + 20 = 107$	107
from 100 to 300	1	100	$100 \times 1 + 15\% = 115$	$115 + 30 = 145$	$145 + 10 \times 1 = 155$	$155 + 20 = 175$	175
	2	100	$100 \times 2 + 15\% = 230$	$230 + 30 = 260$	$260 + 10 \times 2 = 280$	$280 + 10 = 290$	290
from 300 and above	1	1000	$1000 \times 1 + 55\% = 1550$	$1550 + 70 = 1620$	$1620 + 20 \times 1 = 1640$	$1640 + 10 = 1650$	1650
	2	1000	$1000 \times 2 + 55\% = 3100$	$3100 + 70 = 3170$	$3170 + 20 \times 2 = 3210$	$3210 + 10 = 3220$	3220

Complex settings for advanced users

Price group type
 Calculates internal delivery as Taobao itself. By weight if it was provided by seller, otherwise by quantity.

Below are definitions and formulas in order to quickly understand the process. Choose appropriate scheme and use!

Basic definitions:

- **Pricing** — the mechanism of goods price formation on showcase and in orders. This is a set of rules, settings, formulas that convert Taobao price to the one set by agent according to his rules.
- **Local delivery** — delivery from Taobao vendor to logistician (within China).
- **Item code** — goods ID visible in goods card and in address bar:

Formula title in dropdown list	Formula description	Calculation example (product + delivery)	Calculation conditions
--------------------------------	---------------------	--	------------------------

ManyIntervals	Fixed delivery price is added to total sum regardless of quantity of ordered goods with one ID.	<ol style="list-style-type: none"> 1. 1 item: $10 = 10$ 2. Any quantity of items = 10 	<ul style="list-style-type: none"> Interval delivery price = 10.
ManyIntervals WithDeliveryPerKilogramm	Item weight is taken into account. Fixed delivery is multiplied by one item (unit) weight.	<ol style="list-style-type: none"> 1. 1 item: $(0,450 \text{ kg} * 10) * 1 \text{ item} = 4,5$ 2. 3 items: $(0,450 \text{ kg} * 10) * 3 \text{ items} = 13,5$ <p>Weight is 1 if it is unknown:</p> <ol style="list-style-type: none"> 1. 1 item: $(1 * 10) * 1 \text{ item} = 10$ 2. 3 items: $(1 * 10) * 3 \text{ items} = 30$ 	<ul style="list-style-type: none"> 1 item weight = $0,450 \text{ kg}$ Interval delivery price = 10.
ManyIntervals WithDeliveryPerOneItem	Fixed delivery price is added to each item.	<ol style="list-style-type: none"> 1. 1 item: $10 * 1 \text{ item} = 10$ 2. 3 items: $10 * 3 \text{ items} = 30$ 	<ul style="list-style-type: none"> Interval delivery price = 10.
AdvancedDelivery	<p>Fixed delivery price is added to each item taking into account its weight. Item weight is taken if vendor set delivery price by weight steps (that is delivery price of the first kg and subsequent kg).</p> <p>Item weight is equal to first step weight (for example, 10 kg) if weight is not set.</p>	<ol style="list-style-type: none"> 1. 1 item: $20 = 20$ 2. 3 items: $20 + 5 = 25$ <p><i>In example 1 we add 20 — because one item does not exceed the first weight step from condition.</i></p> <p><i>In example 2 we add 5 — because 3 items 1,350 kg, that is first kg is for 20 and subsequent is for 5 as set in condition.</i></p> <p>"Calculated weight" is used if vendor did not set delivery with weight step:</p> <ol style="list-style-type: none"> 1. 1 item: $20 = 20$ 2. 3 items: $20 + (3 \text{ items} * 10 \text{ kg} - 10 \text{ kg}) / (1 \text{ kg} * 5) = 24$ 3. 10 items: $20 + (10 \text{ items} * 10 \text{ kg} - 10 \text{ kg}) / (1 \text{ kg} * 5) = 38$ <p><i>(3 items * 10 kg - 10 kg) / (1 kg * 5) — this is calculation of approximate delivery of 3 items with 10 with "calculated" weight of 10 kg.</i></p>	<ul style="list-style-type: none"> Local delivery price = 10. Local vendor delivery is set with certain weight step: first kg = 20, each subsequent = 5 "Calculated weight" = 10 kg

<p>ManyIntervals WithDeliveryP erRoundedKil ogrammm</p>	<p>Calculation takes into account item weight rounded to even kg. Weight sum of all items with one ID is rounded.</p>	<p>1. 1. 1 item: 1 kg * 10 = 10 2. 2. 3 items: 2 kg * 10 = 20</p> <p><i>In example 2 kg because weight sum of 3 items is 1,350 kg and it is rounded to 2 kg</i></p>	<ul style="list-style-type: none"> • 1 item weight = 0,450 kg • Interval delivery price = 10.
<p>AdvancedDeliveryByQuantityIfNoWeight (set by default)</p>	<p>AdvancedDelivery strategy (line 4 of this table) is used if vendor set delivery price calculation by weight steps (that is delivery price of first and subsequent kg)</p> <p>Delivery price will be calculated according to items quantity (not weight) if vendor set delivery by items steps.</p> <p>Vendor shows minimum delivery price (for example, for 10 items) and price of each subsequent items step (for example, each 2 items cost 5) in this case</p> <p>This is a strategy for more accurate delivery calculation of items with lack of weight set by vendor.</p>	<p>1. 1. 1 item: 20 = 20 2. 2. 3 items: 20 + 7 = 27</p> <p><i>In example 1 we add 20 because 1 item does not exceed the first weight step from condition.</i></p> <p><i>In example 2 we add 7 because 3 items 1,350 kg, that is first kg is for 20 and subsequent is for 7 as described in condition.</i></p> <p>Items quantity is used if vendor did not set weight:</p> <p>1. 1. 1 item: 10 = 10 2. 2. 30 items: 10 + 20шт*1 = 30</p> <p>First 10 items cost 10, each subsequent item costs — 1.</p>	<ul style="list-style-type: none"> • Interval delivery price = 10. • Local vendor delivery is set with certain weight step: first kg = 20, each subsequent = 7 • Delivery price of 1 item = 1 • Price of first 10 items = 10
<p>AdvancedDeliveryPerVendor (NEW!)</p>	<p>Local delivery in item card is 0 in such strategy. Vendor delivery calculated by Taobao rules is added in a shopping cart.</p> <p>Goods will be grouped by vendors and each group will have total delivery.</p> <p>It is recommended to hide delivery options in item card not to confuse customers. It is done in Configuration – Website configuration – Item info</p>
