- Aliexpress

Go to: **Configuration** Instance configuration Provider configuration

The screenshot displays the 'Provider configuration' page for Taobao. The breadcrumb trail is 'Configuration > Instance configuration > Provider configuration'. The 'Provider configuration' tab is active, and the 'Configuration' menu item in the sidebar is highlighted. The main content area is titled 'Provider configuration' and shows 'Taobao integration settings'. Under 'Selected promotion types', there are three items: 'Default', 'Special', and 'Search's promoti...'. The 'Add:' field contains 'Vip'. The 'Work of filters from search' is set to 'Always if available' and the 'Brand filter' is set to 'Disabled'. A 'Save' button is visible at the bottom of the settings section.

This section configures all product providers that have been connected to your OT Box. Each specific product provider has its own settings, which are discussed below.

Contact OT managers in your Skype chat to connect additional trade providers.

## Providers order

The list shows all connected providers. Available providers are in the right column.

Providers order is in the left column.

## Provider configuration

Save

## Taobao

Select Taobao on the tabs with product providers:

## Set up Taobao discounts

Taobao has certain discounts that OT Box gets through the API. You can set which discounts to use when working with Taobao products. Since only one of the selected discounts is used, you can set the priority of use: if there is no discount A, we use discount B. For convenience, discounts are presented in a list where you can choose which discounts will be used as well as set the priority in descending order.

Use the settings to select discounts and their priority:

## Add discounts

There is a drop-down list on the right with all available discounts. Click the list:

In the list, select the discounts that we will use:

Click selected discount to make it the main one in the window:

## Do not take the following types of discounts

Taobao has its own discounts. You can choose those that will not be taken into account when calculating goods cost.

Use the list on the right to select discounts that we are going to exclude

Click a discount and add it into the left list with plus button.

Click "Save" button

**Do not take the following types of discounts**

Added: 55盛浼 99欢聚价 缤雄 高级会员 新生价到 (Ne... 普通会员 (Ord... 新年价 (New Y...

Add:

Area code for China's delivery calculation

You can remove discounts from the list by clicking cross to the right of the discount name. Discount is not deleted and will be available in the list on the right.

**Do not take the following types of discounts**

Added: 55盛浼 99欢聚价 缤雄 高级会员 新生价到 (Ne... 普通会员 (Ord... 新年价 (New Y...

Add:

## Specify area code for China's delivery calculation

The area code is used to calculate the shipping cost within China ("[Internal Delivery \(Configuration\)](#)" in admin panel). To set the region, specify the exact address of the warehouse in China where orders from Taobao will be sent.

In the list you can search for necessary region by name (provinces, districts, etc.) and by index (zip-code):

Write zip code or region in search field to find necessary delivery region:

Search result will be displayed as characters are entered. Select necessary result in the list if it is available there:

Save choice clicking check-marked button:

Ready. Selected region will be used now to calculate domestic delivery (from Taobao seller to the Logist's warehouse within China):

## "Warehouse" module

Select "Warehouse" in "Provider configuration":

**Attention!** Settings cannot be changed if items have already been added into the Warehouse!

Indicate currency of goods price

The currency you choose will be used in the product card.

Click currency name to change currency of goods in the Warehouse

Expand drop-down list now by clicking it with the mouse

Select necessary currency in drop-down menu

Save choice clicking check-marked button

## Language of goods and descriptions

Click language to change display language of products in the Warehouse

Expand drop-down list now by clicking it with the mouse

Select necessary language in drop-down list

Save choice clicking check-marked button

You can add goods into [Goods from Stock \(Warehouse\)](#) now.

## 1688.com

## Items discounts

You can show or hide discounts for products that the provider has.

In the example we decided that we do not need discounts, but now they are shown. Click "Show"

Select "Hide" in the list

Save choice clicking check-marked button

Select "Show" if you need to show discounts.

## Regionally independent shipping costs

Regionally independent shipping costs are used to calculate at least an approximate cost of delivery when it is not possible to calculate by region. It will be different from the total shipping cost.

Click "Use / Do not use" to open drop-down list

Select necessary variant

Save choice clicking check-marked button

Add area code for delivery calculation

# Aliexpress

The screenshot shows the Aliexpress configuration interface. On the left is a dark sidebar with navigation options: Orders, Pricing, Promotion, Contents, Catalog, Users, Configuration (highlighted with a yellow box), Reports, and Plugins. The main content area has a breadcrumb trail: Configuration > Instance configuration > Provider configuration. Below this are tabs for Website configuration, Orders, Delivery, Languages, Instance configuration (highlighted with a red box), Letters templates, and System. A 'Provider configuration' tab is also highlighted with a red box. The main heading is 'Provider configuration'. Under 'Provider order', there are 'Added:' and 'Add:' sections. The 'Added:' section lists Taobao, 1688.com, and Alibaba.com. The 'Add:' section has a 'Warehouse' dropdown and a '+' button. A 'Save' button is below. On the left, a list of providers includes Taobao, 1688.com, Alibaba.com, Warehouse, and Aliexpress (highlighted with a red box). The 'Aliexpress integration settings' section has a search bar for 'Target area code for delivery calculation' and a dropdown menu with regions like Afghanistan (AF), Aland Islands (ALA), Albania (AL), Alderney (GBA), Algeria (DZ), American Samoa (AS), and Andorra (AD).

Select target area code for delivery calculation

This close-up shows the 'Aliexpress integration settings' section. The search bar for 'Target area code for delivery calculation' is highlighted with a red box. Below the search bar, a dropdown menu is open, showing a list of regions: Afghanistan (AF), Aland Islands (ALA), Albania (AL), Alderney (GBA), Algeria (DZ), American Samoa (AS), and Andorra (AD). A blue checkmark button is visible to the right of the dropdown.

Enter region into search bar (you can enter the first few letters)

This close-up shows the search bar with 'ang' entered. The search bar and the dropdown menu are highlighted with a red box. The dropdown menu now shows filtered results: Angola (AO), Anguilla (AI), and Bangladesh (BD). A blue checkmark button is visible to the right of the dropdown.
