

# Languages and Multilanguage module (OT API Key)

## How many languages can be enabled?

Only 1 language is available in OT API Keys K0 Basic, K1 Standard and K2 Advanced. It is possible to use "Multilanguage" Module and add several languages for OT API Keys K0 Basic, K1 Standard and K2 Advanced. See [price-list](#)

It is possible to use "Multilanguage" Module and add several languages for OT API Key K3 Enterprise for free.

At the moment we provide manual translation of catalog, interface, functional words and phrases only in English and Russian languages

Content translation (product descriptions, seller's info) is done automatically (like google translate)

"Multilanguage" Module allows to add and show other languages. Language version should be prepared by website owner.

### Note!

Catalog and goods description are translated automatically, interface and functional words and phrases should be translated manually.

Autotranslation is available for the following languages:

1. Russian (русский)
2. English (English)
3. Mongolian (Монгол хэл)
4. Chinese ( )
5. Spanish (Español)
6. German (Deutsch)
7. Portuguese (Português)
8. Bulgarian (Български)
9. Hebrew( )
10. Armenian( )
11. Yakut (Саха тыла)
12. Polish (Język polski, polszczyzna)
13. Georgian ( )
14. Romanian (Limba română)
15. Ukrainian (Українська мова)
16. Finnish (Suomi)
17. Japanese ( )
18. Azerbaijani (Azərbaycan dili)
19. Kyrgyz (Кыргыз тили)
20. Czech (čeština)
21. Arabic ( )
22. Korean ( )

## How to choose language?

Choose language from the list above and copy title (up to brackets)

Click <http://docs.otapi.net/en/Documentations/Method?name=GetLanguageInfoList>

Write your OT API Key into instanceKey field

Write chosen language into language field

## Category: other

[GetCountryInfoList](#)  
[GetErrorDescription](#)  
**[GetLanguageInfoList](#)**  
[GetTicketCategories](#)  
[GetTicketInfoList](#)  
[ResetInstanceCaches](#)

### Method GetLanguageInfoList

To receive the list of accessible languages

Argument	Type	Description
instanceKey	String	Instance key
language	String	language for requested data

Returns : [NamedPropertyListAnswer](#)

**instanceKey**

**language**

☒ Use test values  
☐ Show debug information

Click «Invoke»:
