

"Converter 2.0" module (currency exchange rate synchronization)

- [Description](#)
 - [Applicable currency exchange rates](#)
 - [Configuration](#)
 - [Default settings](#)
 - [Custom settings](#)
 - [Automatic synchronization](#)
 - [Without synchronization](#)
 - [Edit currency exchange rate](#)
 - [Delete currency exchange rate](#)
 - [Connect new bank for synchronization](#)
-

Description

This module expands capabilities to manage currency exchange rates by adding new sources of exchange rates synchronization (together with the Central Bank of the Russian Federation). Exchange rates information can be obtained from the following sources now:

1. [CurrencyLayer service](#)
2. [The People's bank of China](#) (for more information see Wikipedia)
3. [National Bank of Ukraine](#)

This module allows to select a source of exchange rate synchronization and specify margin rate separately for each currency.

Note!

"Converter 2.0" module is included into OT Box Top version (version 1.7.0 and later).

The module is available for website version 1.7.0 and later.

Applicable currency exchange rates

A list of default currencies in "Pricing-Currency" section is available when "Converter 2.0" module is enabled.

The screenshot shows the 'Currency' configuration page. The left sidebar has 'Pricing' highlighted. The main content area has tabs for 'Currency', 'Price', 'Discounts', and 'Banker'. The 'Currency' tab is active, showing the 'Base currency' as RUB. Below this, there are sections for 'Provider currencies' (listing Taobao - CNY and 1688.com - CNY), 'Currencies' (with a 'Showcase currencies' section showing USD and RUB), and 'Exchange rates'. The 'Exchange rates' section is highlighted with a red box and contains a table with columns for 'Default settings', 'Sync mode', and 'Rate margin'. The table lists exchange rates for CNY, USD, and JPY against RUB, and CNY against USD, all set to 'By default' sync mode and 0% rate margin.

Default settings	Sync mode	Rate margin
Default settings	Synchronization with Central Bar	0 %
1 CNY = 8.280920 RUB	By default	%
1 USD = 57.164000 RUB	By default	%
1 JPY = 0.502695 RUB	By default	%
1 CNY = 0.144862 USD	By default	%

Contents of the list are nonrandom and depend on settings below:

1. Internal currency.
2. Trade provider's currencies.
3. Showcase currencies.

First, exchange rates between trade provider's currency and internal currency are configured in the list. Next, exchange rates for showcase currencies are included. Duplicate currency combinations are eliminated. Thus, there is no need to calculate and add all conversion variants. This is what module does automatically.

Configuration

Go to "Pricing" section of website admin mode and open "Currency" tab.

Default settings

Default settings are used for currency conversion in case detailed settings of particular exchange rate are not necessary. It is recommended for mandatory settings.

You must first decide which synchronization mode is appropriate for most currency exchange rates and what margin rate value is suitable for you if you want to configure default settings.

Important!

With the “Yandex.Market” module installed, it is worth remembering that margin rate **cannot exceed 10%**.

For example, there is a need to calculate most conversions according to exchange rate of the Central Bank of the Russian Federation with 10% rate margin applied. Select bank you need from the dropdown list:

Custom settings need to be configured in case you wish to specify individual synchronization mode or margin for a specific exchange rate.

Custom settings

Configuring custom settings is the same as configuring default settings with the exception that settings for one exchange rate do not affect conversion of other currencies.

So, you need to decide which currency will be set up. For example, you can configure conversion of euro to rubles as this is conversion of showcase currency (sales currency) to internal currency.

Delete currency exchange rate

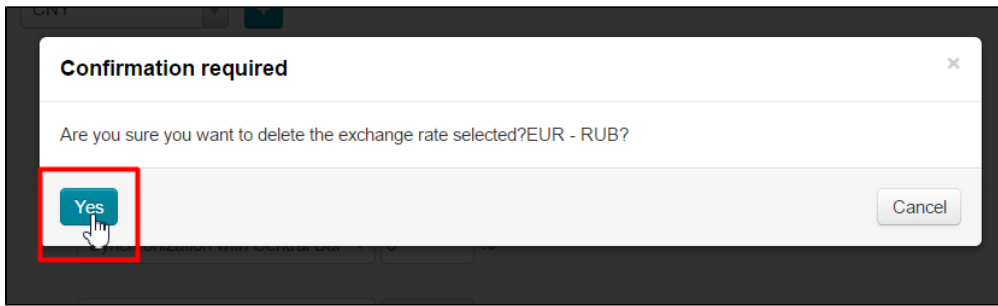

It is important to remember that you should first review the list of currencies in use before deleting the unwanted ones if currency exchange rate is quoted in terms of trade provider, showcase and internal currency. It is possible to modify only showcase currencies on his/her own, without contacting technical support.

- Contact Technical Support Team to change internal currency. Note that all completed orders and money transactions will be shown in terms of formerly used currency after altering internal currency.
- Trade provider currency is unchangeable. Please contact our Technical Support Team if you want to disable connection to trade provider.

Unnecessary currency conversion variants can be deleted once you've changed showcase currency. For example, Euro-currency (the Euro) was deleted. Then all values associated with this currency can be deleted from the list.

Click "Delete" button (x) on the row containing appropriate exchange rate if you want to delete it.

A confirm screen will appear asking if you are sure you want to delete exchange rate. Exchange rate will be deleted once you click "Yes".

Click "Save" button when you delete all unnecessary variants.

The "Currencies" settings page. Under "Showcase currencies", there are buttons for USD, EUR, and RUB. The "Add currency" section shows "CNY" selected. The "Exchange rates" section has a table with columns for "Sync mode" and "Rate margin". It lists several exchange rates: 1 CNY = 0.150000 EUR, 1 CNY = 8.280920 RUB, 1 USD = 57.164000 RUB, and 1 JPY = 0.008793 USD. Each row has a "Sync mode" dropdown and a "Rate margin" input field. The "Save" button at the bottom left is highlighted with a red box.

Note that in case of inactive currency the presence of currency exchange rate and synchronization mode associated with it won't affect site performance. Besides, inactive rate is neglected. That is why its removal is merely aesthetic.

you deleted exchange rate used in operations and it was automatically added again if exchange rate shown in red appears after saving.

The "Exchange rates" section after saving. It shows the same table as before, but with new entries in red text: 1 JPY = 1 RUB, 1 EUR = 1 RUB, 1 CNY = 1 USD, 1 USD = 1 EUR, and 1 JPY = 1 EUR. The "Save" button at the bottom left is highlighted with a red box.

Now you should click "Save" button once again and then all exchange rates shown in red will be recalculated like default exchange rates.

You can make changes in case you are not happy with the default variant before saving.

The above example shows that essential setting cannot be permanently deleted. However, the worst case scenario is that deleted exchange rate will be reset, but in so doing, your personal setting will be ignored.

Connect new bank for synchronization

Additionally, an opportunity is provided to add new sources of exchange rates (56 national banks) at your request – fast and free. Adding a synchronization source which is not on the list <http://bank.exchange> on a paid basis is also possible and can be discussed.

- Submit connection request to our Support Team in case necessary bank is in the list.
- Contact OT Commerce manager via Skype to discuss possibility to add the bank you need for a fee if you can't find necessary bank in the list.
