

Photobooth (module description)

“Photobooth” module aims at increasing customer loyalty. Any customer can feel uneasy when he/she doesn’t know how an item will look like upon delivery. With the “Photobooth” module, you can attach photos of products taken in a warehouse in China so that a customer will have a live view of the product.

Thus, “Photobooth” module helps your store in a few big ways:

- You will ease customer anxieties about an order~since you have not just checked everything but also assisted the customer to buy the right product and feel good about it.
- With this module, the probability that a customer will buy from you again is increased as you’ve persuaded a customer that you are a trustworthy seller (you do not hold anything back and show things as they are)
- The order amount will be increased due to trustworthiness: as the shopper knows that he/she can check the product via photo he/she can order a more expensive product (for example, smartphone or other equipment) without fear to receive a faulty one.
