Go to: [Configuration](#) [Instance configuration](#) [Provider configuration](#)

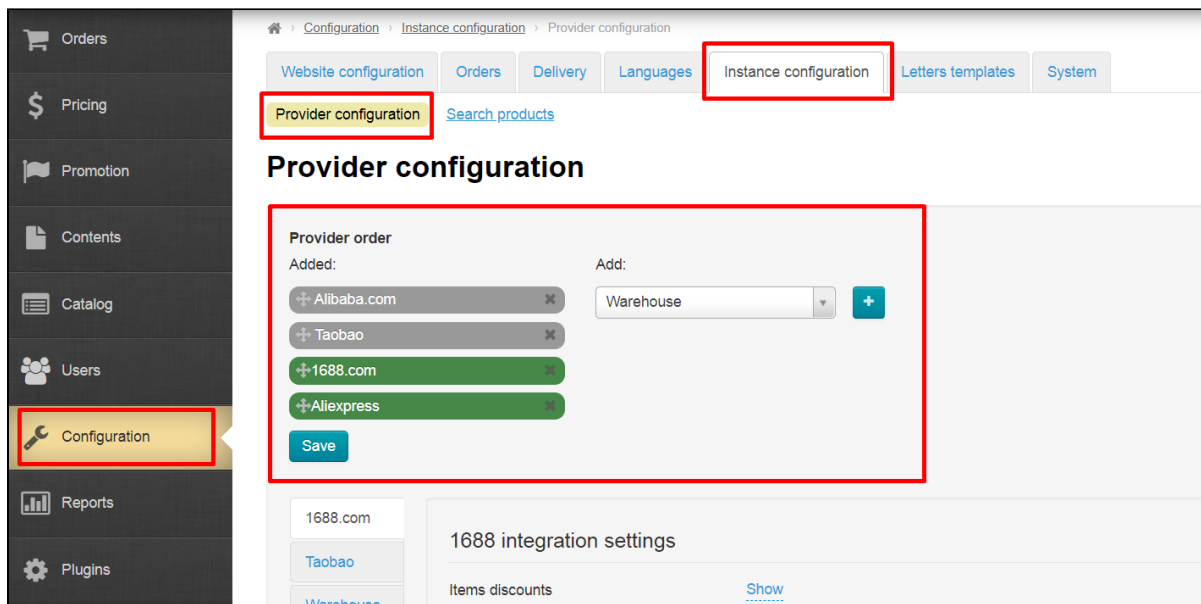

This section configures all product providers that have been connected to your OT Box. Each specific product provider has its own settings, which are discussed below.

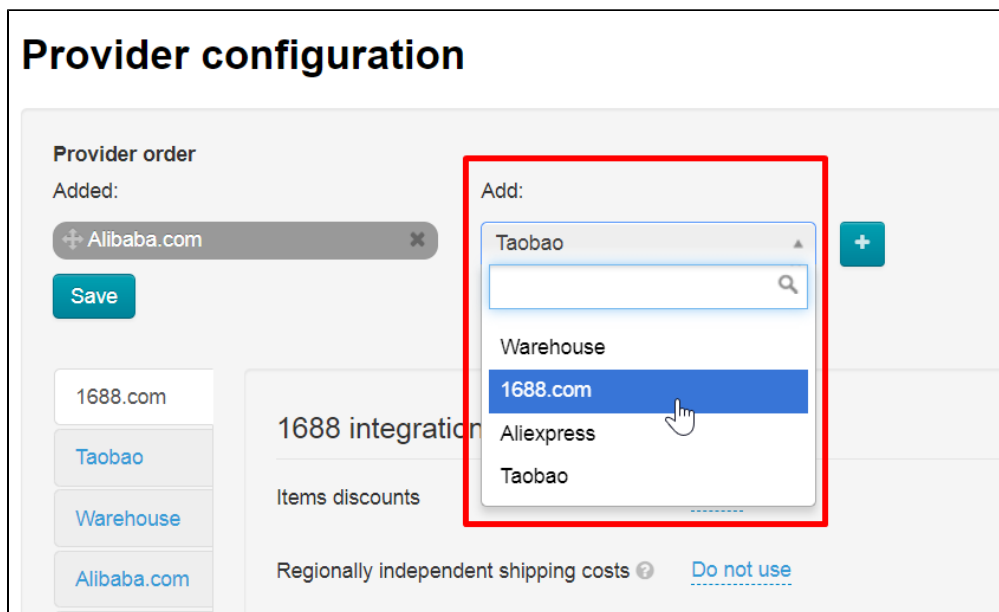

Contact OT managers in your Skype chat to connect additional trade providers.

## Providers order

The list shows all connected providers. Available providers are in the right column.

Providers order is in the left column.

## Taobao

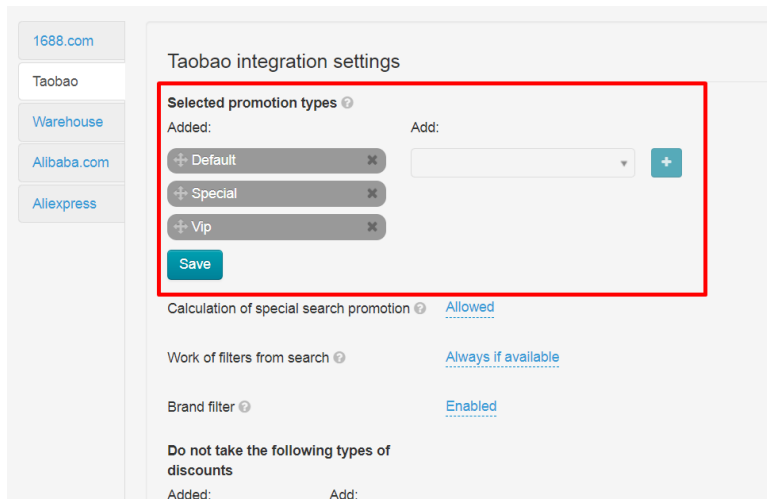

Select Taobao on the tabs with product providers:

## Set up Taobao discounts

Taobao has certain discounts that OT Box gets through the API. You can set which discounts to use when working with Taobao products. Since only one of the selected discounts is used, you can set the priority of use: if there is no discount A, we use discount B. For convenience, discounts are presented in a list where you can choose which discounts will be used as well as set the priority in descending order.

Use the settings to select discounts and their priority:

## Add discounts

There is a drop-down list on the right with all available discounts. Click the list:

### Taobao integration settings

## Specify area code for China's delivery calculation

The area code is used to calculate the shipping cost within China ("[Internal Delivery \(Configuration\)](#)" in admin panel). To set the region, specify the exact address of the warehouse in China where orders from Taobao will be sent.

In the list you can search for necessary region by name (provinces, districts, etc.) and by index (zip-code):

Area code for China's delivery calculation

Q

- All provinces (1)
  - Beijing (110000)
  - Tianjin (120000)
  - Hebei Province (130000)
  - Shanxi Province (140000)

# Aliexpress

The screenshot shows the Aliexpress configuration interface. On the left is a sidebar with navigation links: Orders, Pricing, Promotion, Contents, Catalog, Users, Configuration (highlighted with a red box), Reports, and Plugins. The main content area has a breadcrumb trail: Configuration > Instance configuration > Provider configuration. Below this are tabs for Website configuration, Orders, Delivery, Languages, Instance configuration (highlighted with a red box), Letters templates, and System. Under the Instance configuration tab, there is a 'Provider configuration' section. It includes a list of providers: Taobao, 1688.com, and Alibaba.com. Below this is a 'Warehouse' dropdown menu and a '+ Add' button. A 'Save' button is also present. To the right of the provider list is the 'Aliexpress integration settings' section. It features a search bar labeled 'Target area code for delivery calculation' and a dropdown list of regions. The 'Aliexpress' link in the provider list is highlighted with a red box.

Select target area code for delivery calculation

This is a close-up of the 'Aliexpress integration settings' section. It shows the search bar labeled 'Target area code for delivery calculation' with a magnifying glass icon. Below the search bar is a dropdown list of regions: Afghanistan (AF), Aland Islands (ALA), Albania (AL), Alderney (GBA), Algeria (DZ), American Samoa (AS), and Andorra (AD). A red box highlights the search bar and the dropdown list.

Enter region into search bar (you can enter the first few letters)

This is another close-up of the 'Aliexpress integration settings' section. The search bar now contains the text 'ang'. The dropdown list shows the first few regions matching the search: Angola (AO), Anguilla (AI), and Bangladesh (BD). A red box highlights the search bar and the dropdown list.
